

Day 3 - Github Copilot

- ① Debugging & Improving APIs / Apps.
- ② Use Copilot for Data-related Tasks. ✓
- ③ Coding Agent / Cloud Agent ✓
- ④ Governance, Safety & Enterprise Considerations.
- ⑤ Mini Project

Best Practices: Debugging

- ① Improve func/API / Code behavior

PROMPT: "Improve this controller method"

getProductById Requirements:

- If product is not found, HTTP 404
- JSON
- code simple

- ② use VSC Debugger with Copilot

↳ Debug Configuration

VSC → Run/Debug → launch.json / server.js

Governance; Safety, Enterprise

- ① Mindset Governance ✓

- ② Code provenance & licensing awareness

- ③ Responsible AI usage

- ④ What can & cannot do — Copilot

- ⑤ Enterprise governance controls ✓

- ⑥ Topics managed outside engineering

Copilot output → Review + Test + Scan

↓
Approved & W

* → "Github Gen AI Service Terms" — Mar, 2026

↳ new / Renewal

- ① All Copilot output is safe to use.
- ② Github own the generated code.

FM/LLM → Internet scale data

Copilot → func → public Repo (licensed GPL)

- ① Check the Org's approved-licensed policy.

- ② Approved dependency.

Responsible AI

- ① Human/dev/TL remains accountable

- ② fine-step responsible-use cycle

what is constrain

iii) Inspect

v) Govern

ii) Generate

vi) validate

- ③ Protect sensitive Info

when context is excluded:

- ④ Validate dependencies and APIs

UUDI

- ⑤ Responsible Prompt

What Copilot can do effectively?

- ✓ Code Generation
- ✓ Test Generation
- ✓ Code Review
- ✓ Explain the Code
- ✓ Create the plan
- ✓ Drafting the doc — docx / Readme / comment.
- ✓ Performing delegated coding through agentic feature
- ✓ Navigate a repo.

What Copilot cannot guarantee?

- ✓ Correctness
- ✓ Security
- ✓ Regulatory Compliance
- ✓ license compliance
- ✓ Architectural consistency
- ✓ Complete Tests coverage
- ✓ Awareness of every org policy
- ✓ Freedom from Bias, public-code matches.
- ✓ Production readiness

Human Approval

Enterprise AI Controls & policies

2 Broad Areas:

- ① Availability = which features, models, agents, MCP servers?

- ② Controls = which restrictions apply?

Audit logs:
